

Cardiovex 10 — Approved Product Profile

SYNTHETIC / FICTIONAL DATA FOR HACKATHON TESTING ONLY

Important Notice

This document is intentionally fictional and must not be used for real clinical, prescribing, regulatory, promotional, or patient-care decisions. It exists only to demonstrate document ingestion, retrieval-augmented generation, citations, and safety routing in PharmaAI Sales Agent.

1. Product Identity

Cardiovex 10 is a fictional oral demonstration medicine containing Demoactive 10 mg. It is presented as a cardiovascular portfolio product for the PharmaAI prototype.

2. Intended Product Positioning

For demonstration purposes, Cardiovex 10 is positioned for adult cardiovascular portfolio discussions. The product profile supports approved-information retrieval, product matching, commercial conversations, and document-grounded answers.

3. Presentation

Demo tablets: 10 mg strength. Demo pack: 30 tablets. This presentation is fictional and is not a real marketed product.

4. Approved Demo Information

The demonstration profile states that the product may be discussed with healthcare professionals in the context of cardiovascular portfolio information. PharmaAI should quote or summarize only information supported by this document.

5. Commercial Information

Demo list price: USD 18.50 per pack. Demo stock status is maintained separately by the PharmaAI commercial database. The AI must use the structured commercial tool for current price and inventory rather than relying on document memory.

6. Product Features for RAG Testing

The document contains intentionally searchable concepts including cardiovascular, adult, 10 mg, 30 tablets, portfolio, approved information, commercial information, and product presentation. These terms are useful for testing semantic retrieval.

7. Safety Boundary

This fictional profile does not provide patient-specific treatment advice, individualized dosing, renal/hepatic adjustment, pregnancy advice, emergency guidance, adverse-event management, or prescribing decisions. Such questions must be routed to qualified human reviewers.

8. Interaction / Evidence Boundary

If a user asks for information that is not explicitly supported by the approved document, PharmaAI should state that the knowledge base does not contain sufficient evidence and should not invent an answer.

9. Demo Follow-up Workflow

A doctor can ask for approved product information, request a product, or ask for authorized commercial information. The supervisor agent can retrieve this profile, while the safety agent blocks critical patient-specific questions and creates a human-review ticket.

10. Document Governance

Document status: Approved Demo. Owner: Verdant Therapeutics — fictional demo company. Review cycle: Demo only. Version: 1.0. This record is a synthetic artifact created for the PharmaAI hackathon.

Field	Demo value
Medicine	Cardiovex 10
Strength	10 mg
Category	Cardiology
Pack	30 tablets
Demo price	USD 18.50
Audience	Healthcare professional information demo
Status	Approved Demo / Synthetic
